Still quickly customizable to meet your specific needs.

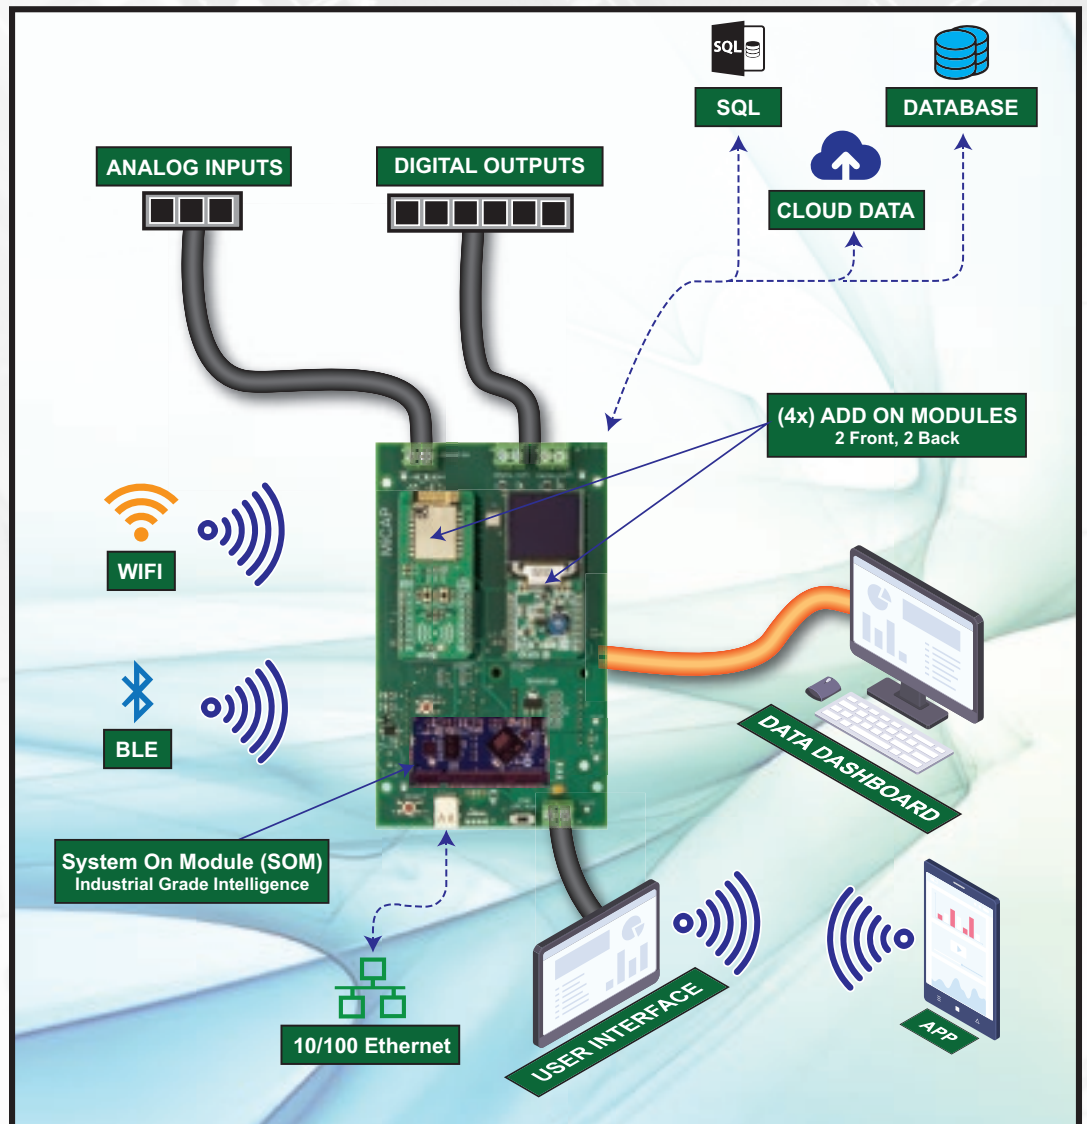

API introduces the S-Series MiCAP Solution (System on Module: industrialized/commercialized intelligence)

All the required interface options including the state of the art plug and play interface boards as the already released M-Series (microcontroller based intelligence) with a faster, more intelligent fully programmable SOM interface. SOM is an industrial grade microprocessor that integrates digital and analog functions on a single "brain board" for rapid software development. Allows you to apply cost effective custom modifications and own solutions based on a specific processor.

Get more. Do more. Be there quicker.

Partial List of Options Include

- LTE Cell Modem
- RFID Reader
- NFC Reader
- Bluetooth
- Barcode Reader
- Distance Sensor
- Temperature & Humidity
- Display interface
- CANBUS
- Optical Isolated Digital Outputs
- Analog input MUX
- ADC 8 inputs
- RS-485 (Full/Half Duplex)
- RS-232
- Ethernet
- PWM
- 4-20mA Input
- 4-20mA Output
- Relay (dual)
- MOSFET output
- Relay (Quad low current)

Use This Design Platform To Launch Your Next Controller Project...Already Developed And Ready For You To Add Your Finishing, Customized Touch-Making It Uniquely Your Own. Get There In Weeks Instead Of Months Or Years.
